## **Heavy Equipment Attachments & Guarding**

---

Accurate Fabricating's standard heavy duty thumbs convert an excavator into a machine with substantial versatility and flexibility by utilizing the thumb to clamp down on oversized loads or objects with your existing attachment. (Bucket, Blade, Rake, etc.)

### **Features:**

- Hardened full floating thumb pin with greasable and replaceable bushings for long life
- Cushioned cylinder in extension and retraction
- Stops to protect cylinder from damage
- Heavy duty construction
- Standard universal design to work with WBM style hook up wedge couplers and generic buckets
- Available in full machine class range of sizes

### **Benefits:**

- Used in all applications supporting construction, demolition, oil and gas, forestry, mining, etc.
- Offer's versatility with improved grip on brush, rocks, culverts, and assorted debris
- Allows precise object placement

### **Additional Available Configurations:**

- 2 to 5 tine options
- Direct link, progressive link and manual link configurations
- Available configurations to handle high abrasion, log handling, extreme applications, etc.
- Customization for specific handling requirements is available

### **G.E.T. options:**

- High Abrasion Tip Savers (replaceable)
- Tooth and adapter configurations
- Customer requests available
