## Heavy Equipment Attachments & Guarding

---

Accurate Fabricating's Road Builder Clean-up Buckets are designed and manufactured to withstand the severest road building & rock digging applications.

### **Features:**

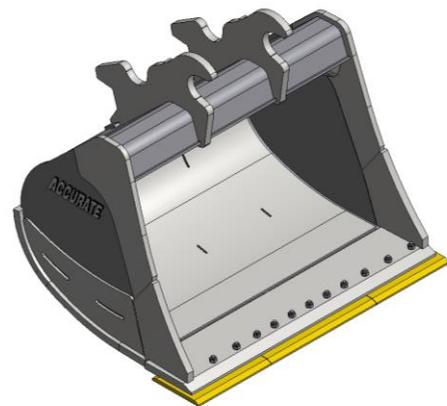

- Increased thickness of wear bars
- Vertical outside corner wear bars
- Heavy duty bolt-on cutting edges (reversible)
- Hard surface welding (internal/external)
- Extra heavy duty box beam construction with increased wear life properties
- Dual tapered design for optimum clean-out properties
- Additional internal liners
- Double radius roll plate
- Two-piece leading edge with thicker corner plate
- Available in full range of sizes

### **Benefits:**

- Increased wear life of adapters and teeth
- Increased durability of bucket components
- Superior loading capabilities
- Reduces cycle times by optimizing machine's breakout and crowd forces
- SAE (ISO 7451 - SAE J296-1993) rated capacities

### **Standard specifications:**

- T100, 100,000 PSI coupler lugging (*All machined contact surfaces*)
- Buried lugging construction c/w cross beam design
- Reinforced upper corners
- 400 Brinell hardness leading edge & corners
- Upsized 400 Brinell hardness, base edge & taller corners
- Upsized 400 Brinell hardness radial wear bars & double layer horizontal wear bars
- 400 Brinell hardness outside cheek plates
- Engineered & certified lifting lug
- 400 Brinell hardness shell liner
- Hard surface welding

### **G.E.T. options:**

- Available on request
